Cortrosyn Stimulation Test (includes cost of Cortrosyn, injection of Cortrosyn, and venous blood collection)				<b>150</b>	

- Routine follow-up visits will be coded as 99212, 99213, or 99214 based on complexity of medical care provided at that particular visit.

- Duration of visit will be strictly enforced to ensure each patient is guaranteed the time allotted for the amount of endocrine care desired along with maintaining that each visit will be on-time. For any patients with diabetes, weight management, and/or three separate medical diagnoses managed in this clinic, the minimal duration of visit will be 20 minutes with preferred 20-30 minutes for patients using insulin pumps given complexity of visits and time needed for adequate documentation.

- Fees for the services listed are reasonably priced based on actual reimbursement from Medicare fee schedule instead of the standard over-inflated fees billed to insurance companies.
